The Department of Chemistry and Construction Engineering			
№	Title	ESTABLISHMENT OF TALC PRODUCTION IN KHOREZM REGION	Annual funding of the project
1	The purpose of the project: "Organization of export-oriented production of talc from the Zineybulak minefield."	<p>Abstract</p> <p>The main purpose of this project is to provide information on the production of raw materials from talc mineral in the field of Chemistry and Construction Engineering. In terms of chemistry and construction, the Zineybulak minefield will produce new raw materials for export from talc mineral raw materials. If we set up the production of these goods, the number of workers will be 11. Next, Production capacity increases to tons per year. The reserves of raw materials are 15 million tons. For the production of these raw materials, we were given 5.5 billion UZS by the Ministry of Innovation Development. Nowadays, the Talc-elastic industry, paper production, lacquer-paint production, medicine, ceramics, mastic and perfumery-cosmetics are the unparalleled materials imported into our country. In addition, the world's talc reserves are limited, it's available only in Russia and Uzbekistan.</p>	5.5 billion UZS
