

Sustainable Procurement Policy

Urgench State University purchases goods, products, equipment, and services from various enterprises and organizations to ensure the sustainability of scientific, social, and economic processes. This takes into account the fact that suppliers of goods and services use natural and socially pure materials in the production process.

Purchasing electronic equipment, preference is always given to its energy efficiency and ability to use solar energy and similar renewable energy sources. When purchasing goods, recycled products from waste have an advantage over other types of products. Urgench State University always purchases products and services from environmentally friendly industries. Renewable energy and recycled waste products form the basis of Urgench State University's sustainable procurement policy.
