

At beginning of new term, Rector of Urganch State University Bahrom Abdullayev visited the Faculty of Chemical Technologies and listened to the presentation of the innovative projects of faculty members.

At the meeting, "Introduction of innovative technology for the production of color pigments for building materials in Khorezm region", "Slag block production in Urganch", "Ceramic tableware production for the food industry", "Import-substitute educational institutions and children Boron production for kindergartens", "Obtaining construction materials based on waste from textile enterprises" and 24 projects were presented.

The Rector paid special attention to the importance of scientific and innovative developments of faculty scientists, their place in production, and their contribution to the development of the field.
